

Rupture Pin Technology builds large valves for flare systems.

Rupture Pin Technology has built many valves for many applications. Large valves for flare applications are just a few of the many valves built. The photo to the right is located at Huntsman Corporation in Texas City, Texas, the largest flare system in the continental United States. There are 8 - 24" valves on this system.

Notice the orientation of the valve, the Rupture Pin Valve works in any orientation, we just have to know at time of order so we can design according. The Rupture Pin valve below is one of 4 - 36" valves sent to Aramco, the Saudi Arabian oil company. The pin Mr. Taylor is holding is 1 1/8" in diameter, 48" long and has a set pressure of 36 psig. Rupture Pin Technology is the only option for reliable and dependable buckling pin valves.
